COMPANY AT A GLANCE

A company built around useful operations.

Grid Platforms Limited is a Nigerian technology company building a coordinated family of business-management platforms for businesses, institutions and operators. Its portfolio also includes public-opinion and research tools for people and organisations. Its purpose-built products focus on the records, responsibilities and everyday workflows that help organisations operate with greater clarity.

Grid Platforms Limited

Business Management Platform Suite

Nigerian technology company · Abuja, Nigeria

01

A coordinated family

Fourteen purpose-built products organised into six operating sectors. Specialist workflows sit alongside shared product principles.

02

An enterprise perspective

A practical starting point for businesses, institutions, associations and operators evaluating their recurring administrative work.

03

Responsible growth

Two products are live, four are in development and eight are planned. Product readiness is described openly and scope is confirmed before commitments.

04

Strategic support

Strategically supported by Zamkah Technologies Limited

Read about Grid Platforms

WHY GRID PLATFORMS EXISTS

The work repeats. Structure makes a difference.

Routine administrative gaps can accumulate across a business or institution. Our starting point is the work people need to coordinate every day.

01

Fragmented records

Information spread across spreadsheets, paper and messages can make it difficult to establish a consistent operational reference.

02

Manual processes

Repeated entry and informal handovers consume attention that could be used to review and improve the work.

03

Delayed reporting

Managers need useful information in time to understand activity and make informed decisions.

04

Poor follow-up

Renewals, document dates and unresolved tasks need an owner and a clear next action.

05

Weak accountability

Responsibilities become easier to understand when activity can be connected to the people and roles involved.

06

Scattered operational data

A focused workflow can make recurring records more understandable to both daily users and those providing oversight.

> Our purpose is practical: help organisations organise records, coordinate responsibilities and see their operations more clearly.

PORTFOLIO OVERVIEW

One family. Six operating sectors.

Explore all 14 products, with their current public development status.

01

Property & Facility

Better-managed spaces. Clearer responsibilities.

- **LeaseGrid** — Live
- **FacilityGrid** — Planned
- **MarketGrid** — Planned
- **PowerGrid** — Planned

02

Energy & Mobility

Visibility across fuel, vehicles and movement.

- **FuelGrid** — In Development
- **FleetGrid** — Planned

03

Institutional Operations

Bring everyday institutional records together.

- **SchoolGrid** — Live
- **HealthGrid** — In Development
- **StaffGrid** — Planned
- **InventoryGrid** — Planned

04

Commercial Services

Make every booking and service easier to manage.

- **HotelGrid** — Planned
- **EventGrid** — Planned

05

Media & Information

A dedicated platform for news and information.

THE GRID FAMILY / 01

Property & Facility

Better-managed spaces. Clearer responsibilities.

LeaseGrid

Live

Bring property, tenant and lease records together, with clearer rent tracking and renewal follow-up.

Designed for
Landlords · Property companies · Plazas & estates · Property managers

Explore LeaseGrid online

FacilityGrid

Planned

Coordinate maintenance, service charges and requests across shared buildings and facilities.

Designed for
Estates, malls & plazas · Office operators · Institutions · Shared facility teams

Explore FacilityGrid online

MarketGrid

Planned

Organise stalls, trader records and market dues for more accountable market administration.

Designed for
Market administrations · Trade associations · Unions · Commercial clusters

Explore MarketGrid online

PowerGrid

Planned

Track shared power operations, consumption records and costs with greater clarity.

Designed for
Estates · Managed facilities · Commercial properties · Shared-energy operators

Explore PowerGrid online

Product direction and intended audiences are shown for reference. Availability and capabilities depend on each platform's readiness.

THE GRID FAMILY / 02

Energy & Mobility

Visibility across fuel, vehicles and movement.

FuelGrid

In Development

Connect fuel station sales, stock and shift records for better day-to-day operational visibility.

Designed for
Petroleum marketers · Station owners & managers · Accountants · Attendants

Explore FuelGrid online

FleetGrid

Planned

Keep vehicle, driver, trip and maintenance records organised in one operating workflow.

Designed for
Logistics companies · Corporate fleets · Institutions & NGOs · Transport operators

Explore FleetGrid online

Product direction and intended audiences are shown for reference. Availability and capabilities depend on each platform's readiness.

THE GRID FAMILY / 03

Institutional Operations

Bring everyday institutional records together.

SchoolGrid

Live

Simplify school administration through organised student records, fees and everyday workflows.

Designed for
Schools & administrators · Teachers · Parents · Learners

Explore SchoolGrid online

HealthGrid

In Development

Support health facility administration with organised patient records and operational workflows.

Designed for
Clinics · Hospitals · Healthcare organisations · Care providers

Explore HealthGrid online

StaffGrid

Planned

Bring staff records, attendance and people administration into a consistent workflow.

Designed for
Businesses · Institutions · People administrators · Team managers

Explore StaffGrid online

InventoryGrid

Planned

Keep track of stock, inventory movements and branch records to support better decisions.

Designed for
Businesses & retailers · Warehouses · Branch networks · Institutions

Explore InventoryGrid online

Product direction and intended audiences are shown for reference. Availability and capabilities depend on each platform's readiness.

THE GRID FAMILY / 04 + 05

Commercial services and media.

Focused directions for hospitality, events and information.

HotelGrid

Planned

Coordinate room bookings, guest records and daily hospitality operations.

Designed for
Hotels · Guest houses · Serviced apartments · Hospitality groups

Explore HotelGrid online

EventGrid

Planned

Organise venue bookings, event schedules and service records from enquiry to delivery.

Designed for
Event centres & venues · Hotels · Event operators · Organisations

Explore EventGrid online

NewsGrid

In Development

A dedicated news and information platform, with a distinct editorial and media focus.

Designed for
Readers · Journalists & publishers · Advertisers · Institutions

Explore NewsGrid online

THE GRID FAMILY / 06

Public Opinion & Research

Structured questions. Opinion in context.

PollGrid

In Development

Public Opinion, Survey & Polling Platform

General-interest polls and surveys, designed to help people and organisations gather opinion and understand results in context.

Designed for
Members of the public · Organisations & institutions · Research teams · Media organisations · Associations & communities · Brands & professional groups

Platform polls are not official election results. Open polls describe respondents, not representative national opinion. Creation and response collection are not yet publicly available.

Explore PollGrid online

Product direction and intended audiences are shown for reference. Availability and capabilities depend on each platform's readiness.

HOW THE FAMILY WORKS

Specialist products. Shared principles.

Common product thinking helps keep purpose and responsibility visible across the family. It does not imply one shared physical backend or identical capabilities in every product.

01

Identity and roles

Make responsibilities and appropriate access part of the product design.

02

Records and documents

Keep recurring information organised around an operational purpose.

03

Reporting

Present information that helps teams review activity and make informed decisions.

04

Notifications

Help people recognise the next action and the follow-up that matters.

05

Auditability

Aim for traceable important actions and changes within each product's scope.

06

Security

Consider access, transport and responsible handling as development responsibilities.

07

Operational visibility

Connect a clearer view of records with the responsibilities behind them.

08

Support

Plan support and usable guidance around product readiness and agreed commitments.

These are development principles. Specific architecture, safeguards and service commitments depend on each product.

ENTERPRISE ENGAGEMENT

Start with the operation. Plan the next step.

The engagement sequence is adapted to product readiness, organisational needs and agreed responsibilities. Fixed timelines are not assumed.

01 Discovery

Understand your organisation, the people involved and the recurring tasks that need greater clarity.

02 Product / operational fit

Identify the relevant Grid product and confirm its development stage, intended scope and fit with your needs.

03 Demonstration

Where the product is ready, review relevant workflows and discuss what is available versus still planned.

04 Scope and implementation planning

Agree responsibilities, locations, users, data needs and a practical implementation scope before making commitments.

05 Onboarding / data preparation

Plan setup and review the quality, purpose and access requirements of the records to be introduced.

06 User training

Prepare the people responsible for daily work, administration and oversight to use the agreed workflows.

07 Go-live

Review readiness against the agreed scope before introducing the product into day-to-day operations.

08 Support and review

Confirm support arrangements, gather feedback and review how the product fits the organisation's work.

Discuss scope, implementation timing and commercial arrangements with the team. **Explore enterprise resources**

TRUST & RESPONSIBLE TECHNOLOGY

Clear responsibilities. Considered safeguards.

Operational information deserves thoughtful handling, especially in education and healthcare. These principles guide product development.

01

Privacy by design

Consider purpose, data minimisation and appropriate retention when designing workflows.

02

Least privilege

Aim to limit access to what each person's role and responsibilities require.

03

Traceable activity

Make relevant actions understandable through appropriate records and auditability.

04

Responsible data handling

Consider the lifecycle, access and purpose of operational information and documents.

05

Sector-sensitive handling

Education and healthcare records require particular care and clearly defined responsibilities.

06

Appropriate partners

Use regulated or licensed partners for payment-related features where applicable, with scope reviewed for each product.

> Product-specific safeguards and commitments should be assessed in the context of that platform and its stage of development.

Platform principles **Website Privacy Policy** **Website Terms**

PARTNERSHIPS & INSTITUTIONS

Bring expertise to a focused conversation.

We welcome structured discussions with organisations that can contribute relevant technical, sector or implementation experience.

01
Technology partners

02
Industry associations

03
Enterprise organisations

04
Public institutions

05
Implementation and onboarding partners

06
Referral and channel partners

07
Service providers

08
Strategic investors

What a useful partnership starts with

A real operational need, a clearly defined contribution and agreement about responsibilities. Partners should represent product readiness accurately and consider onboarding, support and data responsibilities alongside the initial opportunity.

These categories describe prospective collaboration. They do not represent existing partner agreements or active customer contracts.

> Choose Partnership on the website contact form. Introduce your organisation, area of expertise and the discussion you have in mind.

Explore partnership opportunities

DEVELOPMENT APPROACH

Progress in stages. Readiness made clear.

A Live label confirms a functioning current production service; onboarding and feature scope may still vary. In Development and Planned describe earlier stages.

Live

- LeaseGrid
- SchoolGrid

In Development

- EventGrid

Confirm the scope before you plan

Ask about the workflows available, demonstration readiness, onboarding arrangements and support for the specific product. A wider portfolio creates room for future development; it does not imply that every planned capability is operational today.

Information reflects the company's public portfolio and product status at the date of publication. Confirm product scope and availability with Grid Platforms before making operating plans.
